INDEX OF ABSTRACTS

Volume 12 (1983)

ABRAMSON, IAN. Adaptive density flattening, 184-3.

ABDELHAMID, SAMI N. An estimation procedure for "reference range" from routine laboratory data, 83t-64.

AHSANULLAH, M. Characterization of exponential distribution by minimum variance unbiased estimate of its density, 183-30; On the estimates of the parameters of the first order autoregressive process, 185-7; Record values and the geometric distribution, 185-5; A Characterization of the inverse Gaussian distribution, 83t-70; Characterizations of the exponential distribution by the estimates of reliability, 186-2.

AKRITAS, MICHAEL G. Bootstrapping the Kaplan-Meier estimator, 83t-58; Efficient rank tests with censored survival data, 83t-59; Inference about functional parameters for a Brownian bridge with applications, 185-103; Rank estimators as functionals: differentiability, bootstrapping and a Berry-Esseen theorem, 83t-57.

ALAM, KHURSHEED. Bounded length confidence interval for a common mean, 185-58; Measurement of diversity in a multinomial population, 183-22.

ALI, M. MASOOM. Tests of significance for the exponential distribution based on selected quantiles, 183-2.

ALI, MIRZA. On the test of homogeneity of expected value of positive definite quadratic form (central case), 186-3.

ANDERSON, T. W. Distributions of quadratic forms and Cochran's theorem for elliptically countoured distributions and their applications, 83t-2; Maximum likelihood estimators and likelihood ratio criteria for multivariate elliptically contoured distributions, 83t-3; On the theory of multivariate elliptically contoured distributions and their applications, 83t-4.

ANSLEY, CRAIG F. Stochastic models for spline smoothing, 185-63

ATHREYA, KRISHNA B. Cascades on a Galton-Watson tree, 185-33.

ATWOOD, CORWIN. Density estimation using mixtures, 185-29.

BAKER, JOSHUA. Asymptotic confidence interval estimation for filtered Poisson processes (preliminary report), 185-68.

BAR-LEV, SHAUL K. Large sample properties of the MLE and MCLE for the regular parameter of a truncated exponential family, 83t-63; Reproducibility in the one-parameter exponential family, 185-15.

BARR, D. R. On the asymptotic distribution of Bartlett's test for homogeneity of variances, 185-51.

BASS, RICHARD. The existence of set-indexed Levy processes, 83t-36; A functional law of the iterated logarithm and a uniform central limit theorem for partial-sum processes indexed by sets, 83t-7; Hitting time of a moving boundary for a diffusion, 83t-24; A strong law of large numbers for partial-sum processes indexed by sets, 83t-6.

BASU, ASIT P. Estimation of reliability for k-out-of-p systems, 185-48.

BEAVER, ROBERT. J. On the superiority of the nested multidimensional equal block designs, relative to the classical incomplete block designs, 186-4.

BEGUN, JANET M. Information and asymptotic efficiency in parametric-nonparametric models, 83t-32.

BERAN, RUDOLF. Bootstrap methods in statistics, 83t-35.

BERBEE, HENRY. A limitation of Markov representation for stationary processes, 83t-9.

BERGER, JAMES O. Subjective Empirical Bayes, 185-69.

BERGMAN, BO. TTT-transforms and age replacements with discounted costs, 83t-31.

BERMAN, SIMEON M. Local times of general stochastic processes, and weak forms of self-similarity, 185-52.

BERRY, DONALD A. Optimal stopping in bandit problems, 183-29.

BERTIN, EMILE M. J. Hincin spaces and unimodal probability measures, 83t-74.

BHATTACHARYYA, B. B. Some further aspect of sequential estimation of 1/p, 185-22.

BHATTACHARYYA, GOURI A. On the asymptotic properties of some ML type estimators based on censored data, 185-34

BIRKES, DAVID. Parametrization of factorial designs of resolution IV, 184-20.

BLYTH, COLIN R. Wolfowitz's work on estimation methods, 185-117.

BOENTE, GRCIELA. Qualitative robustness for general stochastic processes, 185-96.

BORTHAKUR, A. Poisson input queueing system with startup time and under control-operating policy, 83t-73.

BRADLEY, RICHARD C. A limitation of Markov representation for stationary processes, 83t-9; Multilinear forms and measures of dependence between random variables, 83t-65.

BRODE, JOHN. Relating Granger and Joyeux' fractional differencing to the stable laws, 185-76.

BROWN, EDWARD. Optimum quantiles for the joint estimation and test of hypothesis of location and scale parameters of normal distribution, 185-27.

BRYC, WLODZIMIERZ. Multilinear forms and measures of dependence between random variables, 83t-65.

BURTON, ROBERT M. Scaling limits for associated point random fields, 184-24.

BUSTOS, A. On the estimates of the parameters of the first order autoregressive process, 185-7.

CAMPBELL, GREGORY. Large sample comparisons of tests for correlated proportions with incomplete data, 185-67.

CANFIELD, E. R. Exact and limiting distribution of sustained maxima, 185-45.

CAPPS, ORAL. Collinearity in simultaneous systems (preliminary report), 185-109.

CARROLL, RAYMOND J. Comparisons between modified maximum likelihood estimates in a structural errors-in-variables model, 183-20.

CHANDA, KAMAL C. Asymptotic properties of Stein estimators for location parameters (preliminary report), 185-30.

CHANG, I-SHOU. On limit sets in Strassen type iterated logarithm laws with subsequences, 83t-13.

CHEN, JEESEN. Drawing a random sample from a density selected at random, 185-64; A note on sums of iid when the first moment doesn't exist, 183-19.

CHEN, PINYUEN. Selecting the t best cells of a multinomial using inverse sampling, 185-3.

CHEN, ROBERT W. Monotonicity of Markov inverse sampling in selecting the t best binomial populations, 83t-38; On the circular-dominance of the fair coin tossing process, 185-43; A renewal approach to the study of occurrence of patterns in a Markov process, 83t-30; Stronger players win more balanced knockout tournaments, 183-31.

CHEN, YUAN-YAN. Tests for new better than used, 185-72.

CHERNICK, MICHAEL R. Properties of bootstrap samples, 83t-82.

CLAYTON, MURRAY K. Bayes sequential sampling for choosing the better of two populations (preliminary report), 185-40

COHEN, JOEL E. The stability of large random systems, 184-27.

COOIL, BRUCE. The asymptotic multivariate distribution of intermediate order statistics, 183-26.

COX, DENNIS D. A penalty method for nonparametric estimation of the logarithmic derivative of a density function, 185-79.

CRANK, KEITH N. Multidimensional birth and death processes with migration (preliminary report), 185-47.

DAHEL, SAHNOUN. Tests for the mean of a multivariate normal distribution with additional information, 83t-48.

DALAL, S. R. Prediction for a compound Poisson-multinomial process, 185-21.

DAVENPORT, JAMES M. Corrected F-tests under heterogeneity of variance, 83t-75.

DAWID, A. PHILIP. Objective probability forecasts (preliminary report), 183-4.

DEHEUVELS, PAUL. Strong limit theorems for maximal spacings from a general univariate distribution, 83t-51

DEMPSTER, ARTHUR P. diagnostics for mixed models analysis, 185-113.

DENNY, J. L. Semimartingales and arbitrage, 185-35.

DHARMADHIKARI, SHAILAJA R. Maximum likelihood estimation for branching differential processes, 83t-19; Maximum likelihood estimation for branching stable process, 83t-18.

DHARMADHIKARI, S. W. Zero-variance estimators for two sampling designs, 183-10; The Gauss-Tchebyshev inequality for unimodal distributions, 83t-69.

DRAPER, DAVID C. Rank-based robust inference in regression models with several observations per cell, 185-106.

DRIANCOURT, CATHERINE. Detection of tendencies in point processes by means of statistical tests, 83t-49.

DUDLEY, RICHARD M. Genotype-environment interaction and kinship correlations (preliminary report), 184-22; Non pair-shattering classes are treelike, 185-82.

ELLIS, STEVEN P. How to predict sudden disasters, 185-20.

EL-NEWEIHI, EMAD. Characterizations of multivariate classes of life distributions (preliminary report), 83t-23; Classes of multivariate new better than used processes (preliminary report), 83t-22.

ENIS, PETER. Reproducibility in the one-parameter exponential family, 185-15.

ERICKSON, K. B. Hitting time of a moving boundary for a diffusion, 83t-24; Rate of expansion of an inhomogeneous branching process of Brownian particles, 184-1.

ESTY, WARREN W. A normal limit law for a nonparametric estimator of the coverage of a random sample, 83t-10.

EUBANK, RANDALL. The hat matrix for smoothing splines, 185-32.

FANG, KAI-TAI. Distributions of quadratic forms and Cochran's theorem for elliptically contoured distributions and their applications, 83t-2; Maximum likelihood estimators and likelihood ratio criteria for multivariate elliptically contoured distributions, 83t-3; On the theory of multivariate elliptically contoured distributions and their applications, 83t-4.

FINDLEY, DAVID F. On the unbiasedness property of AIC for exact or approximating multivariate ARMA models, 83t-47.

FISHER, N. I. Probability plots for independence (preliminary report), 185-12.

FOLKS, J. LEROY. Regression models with the inverse Gaussian distribution, 185-41.

FRAIMAN, RUCARDA. Qualitative robustness for general stochastics processes, 185-96.

FRISTEDT, BERT. Optimal stopping in bandit problems, 183-29.

GAIL, MITCHELL H. A nonparametric procedure for comparing diagnostic tests with paired or unpaired data, 185-62.

GALLO, PAUL P. Comparisons between modified maximum likelihood estimates in a structural errors-in-variables model, 183-20.

GARDINER, JOSEPH C. Risk efficient estimation of exponential mean survival time under random censoring, 183-15; Sequential estimation of the mean survival time under random censoring, 83t-20; Sequential estimation of mean survival time under random censoring, 185-8.

GEMAN, D. Picture segmentation by nonparametric regression, 184-18.

GEMAN, STUART. Picture segmentation by nonparametric regression, 184-18.

GENIZI, ABRAHAM. Decomposition of R^2 in a multiple regression with correlated regressors (preliminary report), 184-19.

GEORGE, EDWARD I. Shrinkage towards multiple points and subspaces (preliminary report), 185-107.

GEORGHIOU, C. A generalized geometric distribution and some of its properties, 83t-39.

GHOSH, MALAY. Choosing between experiments: applications in finite population sampling, 183-7.

GHOSH, SUBIR. Influential observations in view of design and inference, 185-26; Statistical planning when the parameters in the model are of unequal importance, 184-13.

GINE, EVARIST. Limit theorems for random sets: an application of probability in Banach spaces, 185-46.

GLAZ, JOSEPH. Escape probabilities of symmetric walks from symmetric boundaries (preliminary report), 185-2.

GOHAIN, R. Poisson input queueing system with startup time and under control-operating policy, 83t-73.

GOKHALE, D. V. On the estimation of constrained parameters, 185-118.

GOVINDARAJULU, Z. A note on circular error probabilities, 185-111.

GREEN, JEFFREY J. Unbalanced mixed-effects ANOVA, 185-6.

GRENANDER, U. Picture segmentation by nonparametric regression, 184-18.

GRIFFIN, PHILIP. Local limit theorems for matrix normalized sums, 184-17.

GRUBBS, WILLIAM D. Collinearity in simultaneous systems (preliminary report), 185-109.

GUPTA, A. K. Nonnull distribution of the determinant of B-statistic in multivariate analysis, 185-108.

GUPTA, PUSHPA LATA. Characterization for generalized power series signals in additive noise, 185-90; A characterization of the Poisson process, 83t-5.

GUPTA, RAMESH C. A characterization of the Poisson process, 83t-5; On Gehan's Wilcoxon extension and the accelerated failure time model, 83t-14; Relationships between order statistics and record values and some characterization results, 183-6; On the relationship between the proportional hazards and accelerated failure time models in survival analysis, 185-91; Simultaneous comparison of scale estimators and length biased distribution, 183-5; Statistical inference regarding the generalized Poisson distribution, 185-44.

GUPTA, SHANTI S. Bayes-p subset selection procedures for the best population, 185-104.

GUTTORP, PETER. Estimating point process parameters from sampled counting processes (preliminary report), 185-93.

HAHN, MARJORIE G. Limit theorems for random sets: an application of probability in Banach spaces, 185-46.

HALL, W. J. Information and asymptotic efficiency in parametric-nonparametric models, 83t-32; Some sequential tests for matched pairs: a sequential permutation test, 185-73.

HAMDY, H. I. Two-stage procedures for selecting the best exponential population when the scale parameters are unknown and unequal, 83t-79.

HANLEY, JAMES A. A nonparametric procedure for comparing diagnostic tests with paired or unpaired data, 185-62.

HANSEN, JENNIE C. Strong law of large numbers for random compact sets in Banach space, 185-86.

HARDLE, WOLFGANG. Optimal bandwidth selection in nonparametric regression function estimation, 185-23.

HART, JEFFREY D. Efficiency of a kernel density estimator under an autoregressive dependence model, 185-24.

HARVILLE, DAVID A. Unbiased quasi-linear prediction in mixed linear models--a Bayes and empirical Bayes perspective, 185-50.

HASSANEIN, K. M. Optimum quantiles for the joint estimation and test of hypothesis of location and scale parameters of normal distribuiton, 185-27.

HAUGHTON, DOMINIQUE M. A. On the choice of a model to fit data from an exponential family, 83t-44.

HEDAYAT, A. S. A collection of A-optimal designs for control-test treatment comparisons, 83t-55; Families of A-optimal block designs for comparing test treatments with a control, 83t-84.

HELLER, BARBARA. An application of special functions in the characterization of probability distributions, 185-18.

HOEKSTRA, ROBERT M. Evaluation of norming constants for some exponential models on the sphere, 83t-66.

HOLLAND, B. Record values and the geometric distribution, 185-5.

HOUGAARD, PHILIP. Parametrizations of nonlinear regression models, 184-9.

HSIUNG, CHAO A. On limit sets in Strassen type iterated logarithm laws with subsequences, 83t-13.

HSU, JASON C. Two-sided simultaneous confidence intervals for multiple comparisons with the best treatments, 185-59.

HUANG, WEI-MIN. A characterization of limiting distributions of estimators in an autoregressive process, 185-97; Information and asymptotic efficiency in parametric-nonparametric models, 83t-32.

HUDSON, WILLIAM N. Limit theorems for finite-dimensional operator-normed sums, 185-31; Limit theorems for the multivariate binomial distribution, 184-5.

HWANG, FRANK K. Monotonicity of Markov inverse sampling in selecting the t best binomial populations, 83t-38; Stronger players win more balanced knockout tournaments, 183-31.

HWANG, HUEY-LUEN. A characterization of the trades on t-designs, 83t-21; Further investigation of (k,t) trades (preliminary report), 185-100.

HWANG, JIUNN TZON. Universal uniform domination, 185-36.

IMHOFF, JEAN-PIERRE. On the range of Brownian motion (preliminary report), 83t-52.

ISHAM, STEVEN P. Exact simultaneous confidence intervals for pair-wise comparisons of three normal means based on unequal sample sizes (preliminary report), 185-38.

IVANOFF, GAIL. The critical branching process with immigration stopped at zero, 83t-12.

IZENMAN, ALAN J. A probability inequality for multivariate complex Gaussian distributions, 185-53.

JANARDAN, K. G. The generalized Markov-Polya probability model for ascertainment of groups of individuals in social processes, 83t-60; On some consequences of an analog of the Rao-Rubin condition for the generalized Markov-Polya damage model, 185-101.

JANSSEN, PAUL. Recent developments in the theory and applications of U-statistics, 183-27.

JAVIER, W. R. Nonnull distribution of the determinant of B-statistic in multivariate analysis, 185-108.

JEWELL, NICHOLAS P. Least squares regression with data arising from stratified samples of the dependent variable, 83t-86.

JEYARATNAM, S. On estimation after subset selection from two exponential populations (preliminary report), 185-61.

JOAG-DEV, KUMAR. The Gauss-Tchebyshev inequality for unimodal distributions, 83t-69.

JOHN, PETER W. M. Block designs for quadratic blending (preliminary report), 183-24.

JOHNSON, BRUCE McK. Escape probabilities of symmetric walks from symmetric boundaries (preliminary report), 185-2.

JOHNSON, WESLEY O. Normal theory measures of influence, 185-57.

JOHNSTONE, IAIN. Admissibility and recurrence via Poincare inequalities (preliminary report), 184-10.

KARIYA, TAKEAKI. Nonlinear versions of the Gauss-Markov theorem in prediciton and estimation, 185-17.

KEATING, J. Characterization for generalized power series signals in additive noise, 185-90; Simultaneous comparison of scale estimators and length biased distribution, 183-5.

KEMP, ADRIENNE W. Waiting times for a mail-order buyer, 185-74.

KEMP, C. D. On the use of recurrence relationships for probabilities of discrete distributions, 185-75.

KERTZ, ROBERT P. Prophet problems: comparison of stop rule and supremum expectations for several classes of processes, 183-28.

KIRMANI, S.N.U.A. A characterization of the inverse Gaussian distribution, 83t-70.

KLEFSJO, BENGT. TTT-transforms and age replacements with discounted costs, 83t-31.

KLONIAS, V. K. On a class of maximum penalized likelihood estimators of the probability density function, 183-21.

KLOTZ, JEROME H. A series for the incomplete beta distribution (preliminary report), 184-16.

KOCHAR, SUBHASH C. Testing exponentiality against monotone failure rate average, 83t-83.

KOHN, ROBERT. Stochastic models for spline smoothing, 185-63.

KOMANSKA, HENRYKA. Zero-variance estimators for two samping designs, 183-10.

KOTLARSKI, IGNACY ICCHAK. Explicit formulas for characterization of probability distributions by using maxima of a random number of random variables, 185-14.

KOUL, HIRA L. Estimators of scale parameters in linear regression, 83t-61.

KOZIOL, JAMES A. Bayes procedures for combining independent F tests, 83t-67.

KULP, R. W. New asymptotic expansions of the distributions of the LRC for multivariate linear hypothesis, 185-11.

LAMBERT, A. Least-squares estimation of location parameters of several regression lines after a preliminary test on parallelism, 185-28.

LANCASTER, H. O. Compatibility of three 2-dimensional distributions, 83t-78.

LARIMORE, WALLACE E. Entropy and inference on model structure (preliminary report), 184-25.

LASKA, EUGENE. Optimal two treatment repeated measures design in the presence of carryover effects, 83t-11.

LEADBETTER, ROSS. Dependence structure and extremal theory, 185-110.

LEE, JACK C. Prediction for a compound Poisson-multinomial process, 185-21.

LEVY, MARTIN S. An optimal prediction function for the normal linear model (preliminary report), 185-77.

LI, KER CHAU. Cross-validation in nonparametric regression, 184-11; Minimax strategies in sample surveys, 183-23.

LII, KEH SHIN. Tests for scatter in multivariate populations under cost contraints, 185-87.

LIN, C. THOMAS. Isotones of the tests of normality, 185-115.

LIN, HSIEN E. A renewal approach to the study of occurrence of patterns in a Markov process, 83t-30.

LIN, ZONG-ZHEN. On the circular-dominance of the fair coin tossing process, 185-43.

LINDSAY, BRUCE. Density estimation using mixtures, 185-29.

LIU, YUEH-CHIN. Histogram estimation of failure rate and related functions under random censoring, 185-70.

LONGNECKER, MICHAEL T. Tests of the equality of marginal distributions in a bivariate exponential population, 185-66.

LOW, LEONE YARBOROUGH. Exact tolerance limits for bootstrapped U-statistics, 183-16.

LU VALLE, MICHAEL J. Testing for asymmetry by contamination in multivariate data, 185-65

MACK, YUE POK. Remarks on some smoothed empirical process, 185-88.

MACQUEEN, JAMES. Variable order circuit processes, 83t-46.

MAJUMDAR, D. A collection of A-optimal designs for control-test treatment comparisons, 83t-55; Families of A-optimal block designs for comparing test treatments with a control, 83t-84.

MARCUS, RUTH. On testing homogeneity of t normal means against ordered alternatives in r groups, 83t-68.

MARDEN, JOHN I. On the admissibility of the step-down procedures, 83t-76.

MARRON, JAMES STEPHEN. An asymptotically efficient solution to the bandwidth problem of kernel density estimation, 83t-8; Optimal bandwidth selection in nonparametric regression function estimation, 185-23; Smoothness independent optimal estimation of a not too smooth density, 83t-1.

MARTIN, R. DOUGLAS. Influence curves for time series, 185-94.

MARTINSEK, ADAM T. Second order approximation to the risk of a sequential procedure, 185-25; Sequential determination of estimator as well as sample size, 83t-77.

MAURO, DAVID. A combinatoric approach to the Kaplan-Meier estimator, 83t-87.

MAYER, LAWRENCE S. Multivariate cross-lagged panel models: does IQ cause achievement? 184-7.

McCLURE, D. E. Picture segmentation by nonparametric regression, 184-18; Nonparametric inference guided by computer experiments, 186-6.

McCONNELL, TERRY R. Probability and the harmonic analysis of Banach-valued functions (preliminary report), 185-84.

McCORMICK, WILLIAM P. Exact and limiting distribution of sustained maxima, 185-45.

McKEAGUE, IAN. Estimation for diffusion processes under misspecified models, 185-16.

MEDHI, J. Bulk service queueing models and some associated control problems, 83t-50; Poisson input queueing system with startup time and under control-operating policy, 83t-73.

MEEDEN, GLEN. Admissible Bayesian credible sets, 185-85; Choosing between experiments: applications in finite population sampling, 183-7; Some admissible pseudo Bayes estimators in finite population sampling, 183-1.

MEISNER, MORRIS. Optimal two treatment repeated measures design in the presence of carryover effects, 83t-11.

MICHALEK, J. On the relationship between the proportional hazards and accelerated failure time modes in survival analysis, 185-91; On Gehan's Wilcoxon extension and the accelerated failure time model, 83t-14.

MILLAR, P. WARWICK. Nonparametric applications of infinite dimensional Gaussian families, 185-98.

MONRAD, DITLEV. On the p-variation of Gaussian random fields, 183-34.

MORRIS, CARL N. Sequentially controlled Markovian random sampling (SCOMARS), 83t-62.

MUDHOLKAR, GOVIND S. Isotones of the tests of normality, 185-115; Profiles of statistical distributions and some applications, 185-116.

MUKHOPADHYAY, NITIS. Asymptotic results for stopping times based on U-statistics (preliminary report), 185-10; On selecting the best component of a multivariate normal population, 185-9; Sequential and two-stage procedures for selecting the better exponential population covering the case of scale parameters being unknown and unequal, 183-12; Two-stage procedures for selecting the best exponential population when the scale parameters are unknown and unequal, 83t-79.

MUKHOPADHYAY, SUNANDA. On the optimality of group divisible designs under mixed effects model, 83t-41.

MURTHY, VRUDHULA K. Properties of bootstrap samples, 83t-82.

NAGARSENKER, B. N. New symptotic expansions of the distributions of the LRC for multivariate linear hypothesis, 185-11; On the asymptotic distribution of Bartlett's test for homogeneity of variance, 185-51.

NAIMAN, DANIEL Q. Approximating the coverage probability of simultaneous confidence bounds in multilinear regression over rectangular regions (preliminary report), 185-81; -optimality of simultaneous confidence bound (preliminary report), 183-18.

NAIR, VIJAYAN. Confidence bands for survival functions with censored data: a comparitive study, 185-92.

NEMEC, AMANDA. Least squares estimates of conditionally heteroscedastic autoregression, 185-95.

NEWMAN, CHARLES. The stability of large random samples, 184-27.

NEWTON, H. JOSEPH. Simultaneous confidence bands for autoregressive spectra, 185-54.

NGUYEN, HUNG T. Estimation in change-point hazard rate models (preliminary report), 184-2.

O'CINNEIDE, COLM ART. Random environments for the M/M/ queue, 184-29.

OLADIPO, J. A. On the use of recurrence relationships for probabilities of discrete distributions, 185-75.

ORAV, JOHN. The use of shade print maps to display interpolated oxidant levels, 184-4.

PAGANO, MARCELLO. Simultaneous confidence bands for autoregressive spectra, 185-54.

PANCHAPAKESAN, S. On estimation after subset selection from two exponential populations (preliminary report), 185-61; On an estimation problem associated with subset selection (preliminary report), 183-9.

PANTULA, SASTRY G. Linear invariance and admissibility in sampling finite populations, 83t-28.

PAPANICOLAOU, GEORGE C. Diffusions and random walks in random media, 183-13.

PARR, WILLIAM C. Jackknifing differentiable statistical functionals, 185-1.

PARZEN, EMANUAL. Informative quantile functions and graphical diagnosis of distributional type, 186-1.

PATEL, KARTIK R. Profiles of statistical distributions and some applications, 185-116; Isotones of the tests of normality, 185-115.

PATIL, S. A. On the mean square error and bias of estimators based on three observations, 185-112.

PERLMAN, MICHAEL D. Bayes procedures for combining independent F tests, 83t-67; On the admissibility of step-down procedures, 83t-76.

PERNG, S. K. An optimal prediction function for the normal linear model (preliminary report), 185-77.

PESOTCHINSKY, LEON. Robustness of ordering procedures under small errors in the observations, 185-83.

PHILIPPOU, A. N. A generalized geometric distribution and some of its properties, 83t-39; The negative binomial distribution of order k and some of its properties, 83t-81.

PHILIPPOU, G. N. A generalized geometric distribution and some of its properties, 83t-39.

PIEGORSCH, WALTER W. Optimal confidence bands in simple, unrestricted, linear regression, 83t-45.

PIERCE, DONALD A. Statistical methodology for analysis of cancer risk in Japanese A-bomb survivors, 184-6.

PONNAPALI, R. On the estimation of constrained parameters, 185-118.

PRESTON, DALE L. Statistical methodology for analysis of cancer risk in Japanese A-bomb survivors, 184-6.

PURI, PREM S. On a problem of nonidentifiability arising in a simple stochastic model for stereological counts, 183-3.

PUTTER, JOSEPH. Newman-Keuls as a selective inference procedure: a particular case, 83t-56.

PYKE, RONALD. The existence of set-indexed Levy processes, 83t-36; A functional law of the iterated logarithm and a uniform central limit theorem for partial-sum processes indexed by sets, 83t-7; A strong law of large numbers for partial-sum processes indexed by sets, 83t-6.

RANDLES, RONALD H. Distribution-free tests for dependence in bivariate circular data, 185-37.

RAO, B. RAJA. The generalized Markov-Polya probability model for ascertainment of groups of individuals in social processes, 83t-60; On some consequences of an analog of the Rao-Rubin condition for the generalized Markov-Polya damage model, 185-101.

RAO, M. BHASKARA. Convergence in the pth-mean and some weak laws of large numbers for weighted sums of random elements in separable normed linear spaces, 83t-26; A note on convergence of weighted sums of random variables, 83t-25.

RASMUSSEN, UTTARA A. Bayes procedures for combining independent F tests, 83t-67.

RAY, RITA SAHA. Optimal designs under a certain class of non-orthogonal row-column structure, 83t-72.

RESNICK, SIDNEY. Point processes, regular variation and weak convergence, 185-39.

RICHARDS, DONALD ST. P. Evaluation of norming constants for some exponential models on the sphere, 83t-66; Positive definite symmetric functions on finite dimensional spaces, I: Applications of the radon transfer, 83t-71.

RIEDER, HELMUT. A contamination game in robust asymptotic interval estimation of a simple regression parameter, 83t-40.

ROGERS, GERALD S. Estimation in change-point hazard rate models (preliminary report), 184-2.
